Project title: EduGenie-Google Gemini Powered Learning Assistant

Phase 8: Project Demonstration Phase

1. Project Demonstration :

-The final stage of the project is the project demonstration. In this phase, the complete working model of EduGenie: Google Gemini Powered Learning Assistant is demonstrated.

-First, the project is opened in Visual Studio Code and the required environment is activated. The FastAPI server is then started using the appropriate Uvicorn command.

-After starting the server, the EduGenie application is opened in the browser. The main interface of the application is displayed to the user.

-A sample learning question is entered into the application. The request is sent from the frontend to the FastAPI backend. The backend processes the request and communicates with the Google Gemini AI model.

-Gemini processes the user's input and generates an appropriate response. The response is returned through the backend and displayed on the EduGenie interface.

During the demonstration, the major features of the application can be shown, including:

Question & Answer

-A student can enter an educational question and receive an AI-generated answer.

Concept Explanation

-A difficult topic can be entered and EduGenie can provide a simplified explanation.

Quiz Generation

-A topic can be provided to generate practice questions for students.

Summarization

-Long educational content can be processed to obtain important points in a shorter format.

AI Learning Assistance

-Students can interact with EduGenie to receive learning support according to their requirements.

-The demonstration shows the complete workflow from student input to AI-generated output and explains how EduGenie can be used as a smart learning assistant. The project demonstrates the practical application of Generative AI in the field of education and provides an interactive platform for students to improve their learning experience.
